

Ideation Phase

Empathize & Discover

Date	28 september 2026
Team ID	SWTID-2026-4908
Project Name	Import Data using Transform Maps
Maximum Marks	4Marks

Empathy Map Canvas:

User Persona: ServiceNow Administrator / Data Operations Specialist

Goal: Bulk import employee records from spreadsheets into the target Employee Test table cleanly without creating duplicate records or causing system errors.

Canvas Quadrant	User Perspective & Observation
1. Who are we empathizing with?	* Persona: ServiceNow Administrator / HR Data Specialist. * Role: Responsible for loading external spreadsheets into application tables. * Goal: Automate raw data imports while ensuring data integrity.
2. What do they need to do?	* Upload .xlsx spreadsheets to an Import Set staging table (u_employee_import). * Map source spreadsheet headers automatically to target table fields (u_employee_test). * Ensure Employee ID prevents duplicate records during subsequent loads.

3. What do they SEE?	* Disparate employee data spreadsheets arriving in different column layouts. * Long lists of missing or mismatched fields when trying to manually enter records. * Redundant duplicate rows cluttering the system when spreadsheets are re-uploaded.
4. What do they SAY?	* "Manually entering 50+ employee records one-by-one takes hours and leads to typos." * "Why do I have to clean up duplicate records every time a spreadsheet is updated?" * "We need a single-click mechanism to map spreadsheet columns directly into ServiceNow fields."
5. What do they DO?	- Frequently downloads Excel templates and manually verifies row formatting. * Navigates through ServiceNow System Import Sets (Load Data & Transform Maps). * Audits target table records (u_employee_test) to verify field matching accuracy.
6. What do they HEAR?	* Management: "We need this employee dataset uploaded into the system immediately for reporting." * Database Lead: "Make sure you don't overwrite existing users or corrupt target table data!"
7. PAINS (Frustrations & Obstacles)	* High labor cost and time wasted on manual row-by-row data entry. * Risk of human error during manual copy-pasting of sensitive fields like Email or Employee ID. * System clutter and data corruption

	caused by unmanaged duplicate inserts
8. GAINS (Wants & Needs)	* An automated Transform Map pipeline that maps source headers instantly via Auto Map Matching Fields. * Seamless duplicate handling by setting Coalesce on Employee ID. * Clean, validated data populated directly into the Employee Test custom table.
