

User Acceptance Testing (UAT) Report

Date	28 September 2026
Team ID	SWTID-2026-4908
Project Name	Import Data Using Transform Maps
Maximum Marks	4 Marks

Project Overview

- **Project Name:** Import Data using Transform Maps (Spreadsheet)
- **Project Description:** This project involves importing employee information into ServiceNow using Import Sets and Transform Maps. The process stages data in a temporary Import Set Table (u_employee_import), validates and maps standard fields (Employee ID, Name, Email, Department, Location) to the target table (u_employee_test), enforces uniqueness using Coalesce on Employee ID to prevent duplicate records, and builds visual reports and dashboards for administrative monitoring.
- **Testing Period:** September 25, 2026 to September 28, 2026

Testing Scope

- **Milestone 1:** Preparation of sample employee spreadsheet and creation of custom target table (u_employee_test) with required form fields.
- **Milestone 2:** Configuration of Import Set Table (u_employee_import), field mapping, and initial data transformation.
- **Milestone 3:** Validation of imported records, configuration of Coalesce on Employee ID, and re-importing modified/duplicate Excel datasets to verify update vs. ignore logic.
- **Milestone 4:** Creation of analytical pie/list reports and integration into a unified Employee Analytics Dashboards page.

Testing Environment

- **URL/Location:** ServiceNow Developer Instance / myskillwallet.ai Workspace
- **Credentials (if required):** Admin Credentials (System Administrator)

Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Create Target Table & Form Layout	1. Navigate to Tables > Create New . 2. Set Label: Employee Test (u_employee_test). 3. Go to	Table and all required string fields are created and displayed on the form layout.	Table u_employee_test created successfully with all 5 fields.	Pass
		Form Layout and add fields (Employee ID, Employee Name, Email, Department, Location). 4. Save form.			
TC-002	Load Data into Import Set Table	1. Go to System Import Set > Load Data . 2. Upload Sample Spreadsheet.xlsx. 3. Set Label: Employee Import (u_employee_import). 4. Click Submit.	Spreadsheet data is successfully staged in the u_employee_import table.	Staging import set table created with status "Completed".	Pass

TC-003	Field Mapping & Initial Transformation	1. Create Transform Map named Sample Spreadsheet Import. 2. Select Target Table u_employee_test. 3. Click Auto Map Matching Fields . 4. Click Transform .	All fields map correctly and target table populates with spreadsheet rows.	Field mappings matched automatically; records populated target table.	Pass
TC-004	Configure Coalesce Field	1. Open Transform Map under System Import Sets. 2. Go to Field Maps related list. 3. Set Coalesce to True for Employee ID. 4. Save the	Employee ID is designated as the primary key for duplicate checks.	Coalesce set to True for Employee ID successfully.	Pass

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-005	Test Update & Insert Logic via Coalesce	1. Upload updated sheet with 4 rows (2 existing IDs modified, 2 new IDs added). 2. Run Transform. 3. Check Transform History .	Transform History shows 2 records Inserted and 2 records Updated.	2 new records inserted; 2 existing records updated without creating duplicates.	Pass
TC-006	Test Duplicate Ignored Logic	1. Upload the exact same 4-row spreadsheet again. 2. Run Transform. 3. Check Transform History .	System detects identical records and skips processing.	Transform History displays 0 Inserted, 0 Updated, and 4 Ignored.	Pass
TC-007	Generate Visual Reports	1. Go to Reports > Create New . 2. Create Pie Charts for Department and Location using table <code>u_employee_test</code> . 3. Create a List report for Employee details.	Reports generate visual metrics accurately reflecting target table data.	All 3 reports generated with correct counts and visuals.	Pass
TC-008	Build Dashboard & Add Widgets	1. Create new Dashboard Employee Analytics Dashboards. 2. Open created reports and select Add to Dashboards . 3. Verify widget layout.	Dashboard displays all 3 report widgets in a unified view.	Dashboard built successfully with pie chart and list widgets.	Pass

Bug Tracking

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Duplicate record creation on initial import re-run.	1. Upload sample sheet. 2. Run Transform Map without Coalesce set. 3. Re-run import.	High	Closed	Resolved by setting Coalesce = True on the Employee ID field mapping.
BG-002	Dashboard creation restricted via standard menu.	1. Navigate to Self-Service > Dashboards. 2. Click Create New.	Medium	Closed	Bypassed by using backend form PA_DASHBOARDS.FORM after enabling ACL admin override.
