

Project Report: Milestone 3

Project Name: Import Data using Transform Maps
(Spreadsheet)

Milestone: Milestone 3 - Transform Data & Validate and
Enable Coalesce to Avoid Duplicate Records

Assignee: Esakkithai E, Afrin A

Complexity & Duration: Medium | 10 Hours

1. Executive Summary

The primary objective of Milestone 3 is to execute and validate the transformation process from the Import Set staging table to the target Employee Test (u_employee_test) table. Additionally, this milestone implements the Coalesce feature using a unique identifier (Employee ID) to prevent record duplication and handle record updates during subsequent data imports.

2. Completed Scope & Key Subtasks

Subtask 1: Transform Data & Validate Fields

- * Initial Data Population: Executed initial data load from the staging table to populate the custom Employee Test table with all key employee fields (Employee ID, Name, Email, Department, Location).
- * List Layout Personalization: Reconfigured the target list columns in ServiceNow using Personalized List Columns to ensure accurate display order and field visibility.
- * Field Validation: Verified that mandatory attributes contained valid data and loaded without truncation or missing values.

Subtask 2: Enable Coalesce Logic

- * Configuration: Navigated to the Sample Spreadsheet Import Transform Map and updated the Field Maps setting.

- * Unique Key Selection: Set Coalesce = True specifically for the Employee ID field mapping to establish it as the unique primary key.

- * Operational Purpose: Configured the platform to check existing target records against incoming Employee ID entries:

- * If Match Found: Updates existing record details.

- * If No Match Found: Inserts a new record.

Subtask 3: Import Testing & Coalesce Verification

Import tests were executed using modified spreadsheet datasets to validate system handling of inserts, updates, and duplicate ignores:

- * **Test Scenario 1** (Updates & New Inserts):

- * Processed a file with 4 total rows:

- * 2 New Records: Assigned new unique Employee ID values \ Resulted in 2 Inserts.

- * 2 Existing Records: Retained existing Employee ID values with altered names/emails (e.g., test10@gmail.com \ test18@gmail.com, Ajay kumar \ Ajay) \ Resulted in 2 Updates.

- * **Test Scenario 2** (Duplicate Record Prevention):

- * Re-uploaded the identical spreadsheet without changes.

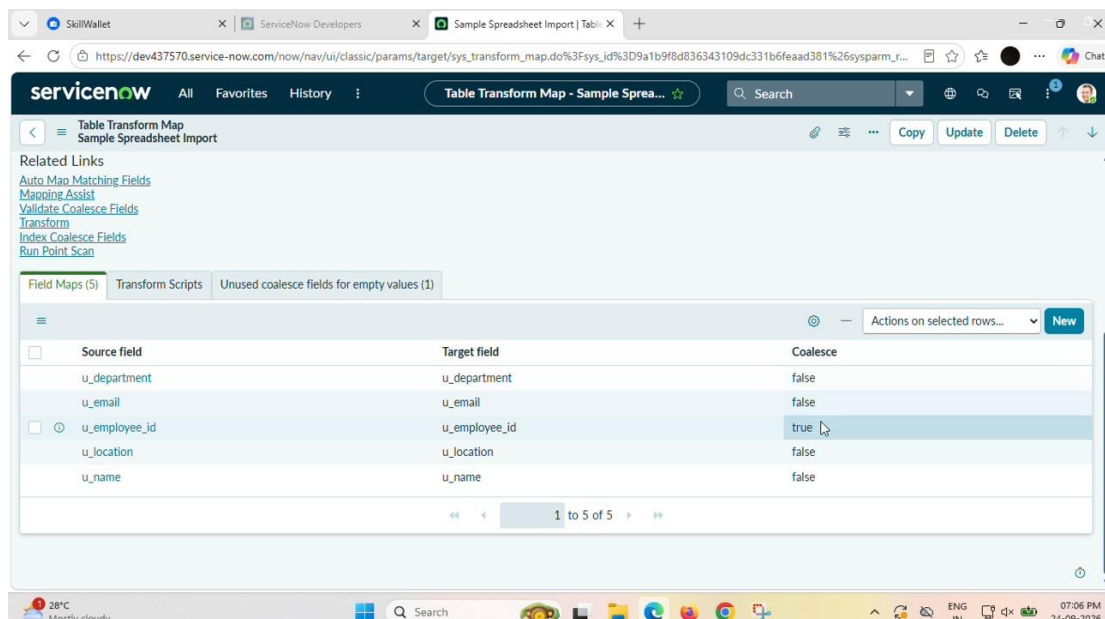

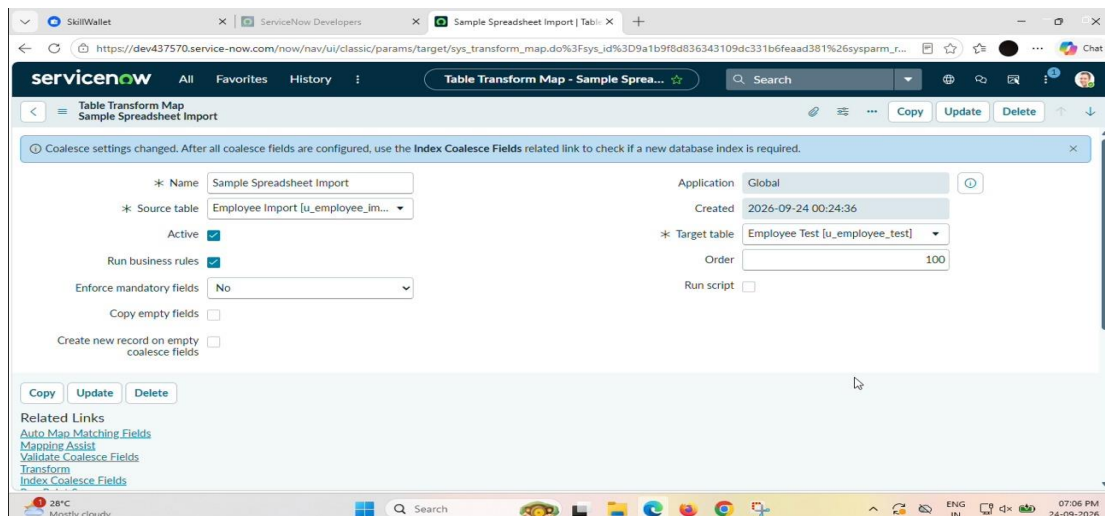

- * Result: 0 Inserts, 0 Updates, and 4 Ignored Rows. Verified complete prevention of duplicate entries.

3. Verification & Execution Results

* Transform History Analysis: Checked Transform History to ensure exact counts for Inserted, Updated, and Ignored records.

* Database State: Target u_employee_test table validated with correct updated records and no duplicate Employee ID entries.
